DAFFODILS and IRISES for Your Garden

S. S. BERRY

1145 West Highland Avenue

REDLANDS, CALIFORNIA

DO YOU KNOW

The National Horticultural Magazine?

If not, you should! \$3.00 per year. The money may be sent to us or to

MR. C. C. THOMAS, 211 SPRUCE STREET, TAKOMA PARK, D. C.

The American Iris Society

It publishes four Bulletins a year and brings to its members all the latest news about iris. It will help you enjoy your garden more, and will prevent your making many mistakes.

Membership is \$3.00 a year. The money may be sent to us or directly to the Secretary of the Society,

MR. B. Y. MORRISON, 821 WASHINGTON LOAN AND TRUST BUILDING, WASHINGTON, D. C.

Include these two subscriptions with your order and we will send you a dollar iris free as a premium.

INTRODUCTION

This is our twelfth iris catalogue. A short daffodil list was issued in 1935, but this is our first to contain daffodil descriptions. Those who require sweeping superlatives fortified by elaborate colored illustrations would best look elsewhere, but those who are searching for lovely, uncommon, and permanently satisfying flowers will discover that this little booklet contains rather more than its full share. Each year a few of its listings are entirely new to horticulture, while a considerable number of others are offered for the first time on the American continent. Among these last we must especially call attention to some of the magnificent daffodils raised in the Antipodes. These are grievous and expensive things to get into normal going after the abrupt reversal of seasons and the shock of climatic change to which they must be Many succumb, but once the survivors are fully established and acclimated we find among them some of the noblest plants we have, strikingly different from the better known beauties of Britain and Ireland, the best of them every bit as fine, and well adapted to our conditions.

In our own little plot where Mr. Wister has jocularly (and too truly) said that we have everything planted three deep, they are interspersed among the irises pretty much all over the garden. The daffodils, not counting the tazettas or the serotinus group, flower for about four months, attaining a glorious peak before the irises have made much growth, then dying gradually away into the swelling crescendo of the latter flower which glorifies April, May, and June. Where space is limited this informal procedure works

out very happily.

The word "daffodil" has not met with a consistent usage in the English The daffodil of old John Parkinson and that of Wordsworth were quite different members of the genus. In this booklet we use the term in its broadest sense to mean any plant of the botanical genus Narcissus, daffodil and Narcissus thus having precisely the relation of the English word rose and the genus Rosa, with complete interchangeability.

CULTURAL NOTES

Daffodils—

Although many people do not seem to realize it, the culture of daffodils is extremely easy and it is a barren garden in which properly chosen varieties will not endure and thrive. The great King Alfred, glorious as it is when well grown, is so complete a failure in many soils and districts that it has given daffodils in general a thoroughly undeserved bad name. The same holds for many of the common florists' varieties, which, adapted principally for forcing, have had far too wide distribution in gardens. The innumerable lovely kinds suitable for exhibition or adapted through their vigor and grace of habit for garden decoration, are a very different proposition. The hard, lifeless clay soils, hot sun, and dry atmosphere of Southern California offer in some ways greater obstacles to successful daffodil culture than are met with in most regions but even these can be successfully surmounted and some varieties, especially certain of the garden hybrids originated in the Antipodes, the Tazetta and Poetaz groups, and a few of the smaller wild Narcissi, do exceptionally well here.

The principal requirement to be met is deep and thorough preparation of the soil. Powerful manures are unnecessary, even objectionable, though a soil richly fertilized for vegetables or some other crop of the previous year will give splendid results in the growing of exhibition flowers. For ordinary garden decoration and cutting not even this is necessary. The bulbs may be put almost anywhere in the borders that fancy dictates, remembering not to associate them with plants requiring heavy fertilizing and that few of them flower well in too much shade.

A light dressing of bone meal or wood-ashes now and then, well raked into the soil, will be all the plant food asked for.

The worst thing daffodils have to fear when in flower is a hot drying wind which soon scorches and withers them, or at the very least burns out the beautiful orange and red edgings from the cups. The ideal exposure is one where there is morning and late afternoon sun but some protection from the mid-day blaze. The bare branches of deciduous trees help greatly and daffodils planted beneath them both look well and do well. All flowers containing orange are particularly lovely when illuminated by the gently glowing rays of sunset.

It is not necessary to dig daffodil bulbs every year, in fact we generally count on our best flowers from bulbs two and three years down, and the garden effect is most certainly better then. Some varieties multiply much faster than others and it is best to be guided partly by this and partly by

the way the plants seem to be doing.

When the drainage is good (and daffodils can not be expected to succeed unless it is), they do not object to reasonable watering all summer, while the poeticus-type and their hybrids are often appreciably the better for it.

For most varieties a safe depth to plant is about 1½ times the depth of

the bulb measured in each case to the shoulder.

Daffodils have their afflictions in the way of diseases and pests as do all plants. In some districts the big Merodon fly is quite a nuisance. Bulb mites and bulb nematodes should also be looked out for. Space does not permit discussion of these here but the interested reader will find ample treatment in the various standard books and bulletins on Narcissus, especially the invaluable Oregon Agricultural Experiment Station Bulletin 304. In our garden the only serious daffodil trouble we have encountered for some years is comprised in the general category of "leaf-stripe". Whether this is a single "mosaic" disease or a symptom variously induced, it is a most insidious trouble wthout any specific remedy. The careful grower, amateur or professional, can only maintain a rigorous watch for it and relentlessly rogue out and burn every bulb which fails to throw clean foliage.

Commercial stocks of many well-known varieties, notably Sir Watkin, Soleil d'Or, and Paper White, are often so badly broken that all three and others as well are no longer permitted in our garden. The fight made shows pridefully in the remarkable cleanness of our stock, but no grower can safely guarantee that every bulb he sends out will never yield to the trouble. The disease is thought to be carried by some sap-feeding organism such as aphis, so a focus of infection may exist just across the neighbor's fence or almost

anywhere.

Irises

The culture of irises depends mainly upon the particular group or type to which the plants belong. That of the majority of the Pogoniris or bearded groups is very simple. Abstention from the use of retentive manure, a fair amount of lime in the soil, and good drainage are the principal points to attend to. The rhizome should be set in the earth at time of planting with the roots carefully spread and the soil well firmed about them, but the top of the rhizome only barely or not quite covered. They should ordinarily be watered well when first set, but more moderately thereafter. In Southern California the most successful iris growers are those who irrigate their plantations occasionally through the summer, perhaps every few weeks like a citrus orchard, following each watering with a light cultivation.

For fertilizer we have found bone-meal, superphosphate of lime, wood

ashes, and old plaster rubble all excellent.

Occasionally someone reports inability to make established plants of irises flower. It is not always easy to assign a cause for this, but quite often too deep planting seems to be responsible, or again it may be too much shade. Sometimes just breaking up the clump and moving to a new position is sufficient to start it going in the right way.

Under our brilliant sun it is often surprising how much shade some of the

varieties will stand and still yield a certain percentage of bloom, but a rather open position is generally best for the Pogonirises, as well as for the unguicularis, spuria, and ensata types.

Ridging the beds or planting on a slope is often resorted to with notable

success.

Apogon Irises require somewhat more moisture and humus in the soil as a rule, and many of them dislike lime. For some groups, notably Oncocyclus and Regelia, quite special treatment is demanded—lighter soil, plenty of sunshine, extra care in drainage, abundance of lime, and no water in summer even if they have to be taken up and stored dry.

Most of the Evansias prefer considerable shade and are among the few

irises which do their best under such conditions.

For the common and disfiguring disease called leaf-spot, spray thoroughly with lime-sulphur in winter before growth is too far advanced and keep the diseased foliage well picked off and burned thereafter as it appears.

TIME OF DELIVERY

Directly the foliage dies down in June is the time for digging daffodils. The bulbs are then dried off, separated, and wherever possible replanted without further delay. We believe that this early planting gives much the best results. Although we can usually supply a considerable number of varieties until well into the fall, it is best to get one's order in early and avoid disappointment. In fact some varieties will not be dug at all unless so ordered. Our bulbs are grown in a dry climate in clay loam; they are therefore often on the small side, but are very firm and solid and give generally good results, better in fact than larger, more watery bulbs do. Stocks of many daffodils are necessarily small, and some will be quite sold out by digging time. In ordering it is therefore desirable to mention a few second choices in case some substituton proves necessary, or if desired the choice for such substitution may be left to us.

Iris rhizomes can be furnished all through the year except in the case of those groups requiring special handling. Midsummer is as a rule the least favorable time.

We have innumerable varieties of both daffodils and irises which we do not list. Therefore in the event of requirements not met in this catalogue, special inquiry is invited.

For Immediate Garden Effect

We strongly recommend planting irises in groups of three or five rhizomes of a kind. Such a number may often be supplied at an appreciable reduction from the regular per unit price.

TERMS

Cash with order or references.

Fulfillment of all orders subject to stock on hand.

Iris prices are for strong, single rhizomes. The iris borer has not yet come into our garden and every care is taken to keep stock as free as possible of rot and other troubles.

Where stock permits, twelve roots of a variety will be supplied for the price of ten, and in the case of an iris priced at 75 cents per plant or less, it is our policy to supply THREE for the price of TWO.

We offer no guaranty except to do our best, but should stock sent prove untrue to name, every effort will be made to replace same satisfactorily.

Paid orders to value of \$5 or over sent carriage free to any part of U. S., but where customer includes allowance for postage with order, extra plants will be sent to cover same.

Orders for plants, when accompanied by cash, except in the case of scarce novelties or special collections, are privileged to an additional selection of plants as follows:

Orders of \$10 to \$25 entitled to 5% additional. Orders of \$25 to \$50 entitled to 10% additional. Orders of \$50 or over entitled to 15% additional.

DAFFODILS

The numerals 1 to 6 following the names are intended somewhat to indicate the relative times of bloom, in an average Redlands season, 1 being first-early, (January), 3 and 4, mid-season, and 6 extremely late, (April).

YELLOW TRUMPETS

AEROLITE (De Graaff 1923), 3.—A lovely smooth and pure-toned flower, the perianth distinctly paler than the rather narrow trumpet. each 20c
BRIGAND (Watts 1923) 3. A bold, sturdy, deep yellow flower, with a large heavily flanged trumpeteach 50c
DAWSON CITY (van Tubergen 1925), 4.—Not an over-large flower with us, but remarkably smooth and well proportioned; full yelloweach \$1.00
DUCHANEL (De Graaff 1923), 4.—Very large, clear yellow, with a frilled and flaring trumpeteach \$1.00
GODOLPHIN (P. D. Williams 1925), 4.—A magnificent full yellow flower of remarkably fine proportions, finish and texture quite exceptional in yellow trumpetseach \$5.00
GOLDEN CITY (West 1923), 1.—The tallest and finest yellow trumpet we offer and one of the earliest, opening in Redlands in January. The supply of acclimated stock is very small, hence exceedingly valuableeach \$25.00 GOLDEN KING (J. C. Williams 1914), 4.—This is one of the older varieties and has become rather overshadowed, but is such a healthy, strong grower and so unfailingly generous in bloom that it is very useful in the garden
HALLMARK (Hall 1927) 5. A clear yellow of beautiful form and style. This fine New Zealander is one of our favorite trumpets; only two or three to go this yeareach \$10.00
HEBRON (The Brodie 1923) 3. A large flower of pure deep yellow throughout of aristocratic quality and finish; one of the very earliest trumpets other than some of those from "below the line"
KING ARTHUR (de Graaff 1923) 4. A good garden daffodil for mid- seasoneach 50c
KING OF MAY (G. L. Wilson 1923) 4. A handsome mid-season daffodil in full yelloweach \$2.00
LORD ANTRIM (G. L. Wilson 1927) 3. A striking golden yellow flower of notable size, substance, and quality, with flanged trumpeteach \$2.50
MAGNIFICENCE (Engleheart 1914) 1. A very early daffodil of clear deep golden color; not over tall with us as yet, but with an imposing great trumpet; a brilliant and showy flowereach \$3.00
MATAMAX (de Graaff 1923) 3. A well-formed flower of clean, pure color and strong growth; described as very late, but not especially so with us; handsomeeach 25c

BICOLOR TRUMPETS

As a group the bicolor trumpets always seem to us the most freshly Spring-like of all daffodils. There is great variation among them from the bright clean contrast of pure white perianth and clear yellow trumpet to the delicate nuances in cream and primrose of the paler ones, some of which pass quite insensibly into the white trumpet class.

EMPRESS (Backhouse 1890) 4. Old and dimmed in glory by her descendants, but so faithful and generous in bloom and so fresh and clean in the contrasting white and yellow of her robes that Empress still remains with us _______ 2 for 25c

EPAMINONDAS (de Graaff 1927) 3. A good tall light bicolor..each \$1.00 JEFTA (de Graaff 1927) 3. Not of the best form and would be discarded except that its pleasing soft cream and primrose and abundant flowering render it of singularly beautiful garden effect...............................each 25c

MOIRA O'NEILL (Engleheart 1923) 2-3. A fine large flower of beautiful finish and proportions; the trumpet clear lemon and with a nicely finished brim. When well grown this is a supremely beautiful daffodil.......Each \$1.50

MRS. JOHN HOOG (van Tubergen 1914) 4. A large flower of good habit and clear, contrasting white and lemon.....each 50c

MUCH THE MILLER, 3. A huge bloom of Weardale coloring but very much finer; sent us from New Zealand a few years ago, it is now performing splendidly and is one of the grandest we list in this group......each \$5.00

SINCERITY (Lower 1930) 3. A flower of refined and beautiful form, the smooth snowy perianth setting off a clear lemon trumpet with its prettily rolled brim.....each \$15.00

SYLVANITE (de Graaff 1927) 4. Strong and graceful, with white perianth and bright light canary trumpet, this inexpensive flower is always a favoriteeach 25c

WEARDALE PERFECTION (Backhouse 1894) 4. The not-to-be despised parent of an aristocratic progeny; of smooth finish and gentle coloring each 25c

WHITE TRUMPETS

These include some of the most serenely beautiful of all daffodils. Merely to grow them means beatification of spirit.

LA VESTALE (de Graaff 1927) 2. A large and tall ivory white flower with a good trumpet which opens light yellow, later passing to ivory. ea. 25c

MRS. JOHN BODGER (de Graaff 1927) 4-5. A very pure-toned, semi-dwarf white trumpet.....each \$3.50

PETER BARR (Barr 1902) 4. A large flower remarkable for its long and narrow ivory trumpet; usually of only medium height......each 35c

W. P. MILNER (Backhouse 1890) 3. A very small creamy daffodil, very pleasant in the rock garden.....each 25c

DAFFODILS WITH FLESH OR PEACH TONES

LOVENEST (Mrs. Backhouse 1928) 3. One must forgive the somewhat thin substance for the dainty pale peachy coloring of the trumpet; the flower is in fact usually classified as a white trumpet.....each \$1.25

WINSOME GIRL, 1. An exquisitely dainty New Zealander published as "Leedsii" and one of the very earliest flowers of its type that we have. The white starry perianth frames a widely spreading, charmingly ruffled crown, of pale citron which under favorable conditions develops a most dainty frill of light pinkish apricot; a sweet seashell of a flower......each \$15.00

CHALICES

These are large-crowned daffodils which may be either pure white or the crown may be light lemon or citron when first opening, paling later to primrose, buff, or white; it is frequently much ruffled toward the rim. They are especially lovely for cutting, though some, such as Marmora and Silver Star and Mary Blewitt are likewise outstanding garden subjects.

ADSUM (Lowe 1927) 6. A medium-sized flower in ivory and lemon which is of value for its extreme lateness.....each \$1.00

HER GRACE (van Tubergen 1914) 4. A regal flower with heavy white perianth and big much-frilled primrose crown; only of medium height; each 25c

MARMORA (The Brodie 1923) 4. Ivory white flower of highest quality, perfect form, and seraphic beauty; crown rather short......each \$1.50

MARY BLEWITT (West) 3. Another beautiful mid-season flower of high quality; well formed white perianth enclosing a beautifully frilled crown of lemon, paling to ivory.....each \$3.50

MITYLENE (Engleheart 1923) 4. A lovely starry flower with smooth white perianth and fluted saucer-like crown of palest primrose.....each 75c

WHITE PEARL (Copeland 1907) 4. An exceptionally neat and pleasing snowy white flower with a trim rather short crown; semi-dwarf habit..ea. \$1

(Small Cups)

The following are of similar coloring to the preceding but have smaller less elaborately formed cups.

MRS. NETTE O'MELVENY (Mrs. Backhouse 1928) 4. A superb, large rounded white flower, the shallow crown opening lemon with an orange picotee, then paling to primrose; tall and strong growing.....each 25c

QUEEN OF THE NORTH (Barr 1908) 3. Strong tall flower with rounded white perianth and fluted light yellow cup.....each 15c

SONGSTER (Watts 1916) Exquisite, white-petaled flower with a light yellow cup which passes to cream, and lovely cool blue-green foliage: the resulting garden effect of a good clump is enchanting.....each 50c

(Flat-eyed Group)

MYSTIC (Guy L. Wilson 1923) 5. The white perianth has a suggestion of greenness and supports "a very shallow, almost flat crown of the same color, merging into pale apple green in the center and edged with the daintiest frill of pinkish orange. The whole color effect is wonderfully delicate and refined" (Wilson). Tall and very late......each 50c

SILVER SALVER (The Brodie 1922) 5. Pure snowy flower of the utmost refinement, the whiteness enhanced by a touch of emerald in the center of the eye; indescribably lovely......each \$4.00

CROWNS

This group, comprising strong-colored daffodils with conspicuous coronas of intermediate length, includes some of the most brilliant achievements of the modern breeder. They must be seen, and, still better, grown, to be appreciated.

BEAT ALL (? 1930) 6. Loose, white perianth, yellow crown; medium height; valuable for the front border and for its lateness.....each 50c

BERDAS (Watts 1923) 2. Starry, narrow-petaled light yellow, with deeper crown; tall and early.....each 50c

BOKHARA (The Brodie 1927) 2. Perianth clear yellow, crown rich orange; smoothly finished, long lasting flower of heavy substance; smaller than its parent Fortune, but more refined; a splendid thing in every way, holding its color as few daffodils do...................................each \$3 00

BORDER QUEEN (West 1928) 4. A magnificent circular flower with soft yellow perianth and large open saucer-like crown heavily margined with scarlet-orange; on the order of Scarlet Queen, but yellower and later. ea. \$35

DERWIN (Watts 1923) 3. A large narrow-petaled starry flower in full yellow, very decorative in the garden.....each 50c

DONAX (Mrs. Backhouse 1910) 5. A rounded flower with yellow petals and deep reddish orange cup; exceedingly colorful.....each 50c

EPICURE (of Dutch origin) 3. Handsome flower with snowy perianth and short open yellow cup.....each 35c

FESTIVE (Mrs. Backhouse 1923) 5. A tall glowing flower of Bernardino type; pointed pale yellow perianth and frilled crown heavily flushed orange; a valuable late-season daffodil.....each 75c

FRICKLESTIN V. C. (West) 4. A large flower with good white perianth and large, heavily frilled yellow crown; citron perianth; very handsome garden plant, and always much admired.....each \$5.00

GREAT WARLEY (Engleheart 1904) 5. Late white and yellow daffodil of rather low growth; strong grower and good border flower.....each 25c

IXION (Barr 1915) 5. A large showy late flower with light yellow perianth and orange crown; imposing garden plant.....each 50c

JOCUNDA (de Graaff 1928) 5. One of our most vivid flowers with creamy perianth and short intense red-orange cup.....each \$20.00

JOHN EVELYN (Copeland 1920) 4. Broad overlapping white perianth and much-shirred flat lemon yellow crown; a superb flower.....each \$1.00

KILLIGREW (P. D. Williams 1907) 3. "A good sized flower of such exquisitely perfect form and balance that one has a sense of complete satisfaction when looking at it . . . the perianth is yellow, and the cup, which is finely frilled and of peculiarly attractive form and proportions, is brilliant

deep rich tangerine orange: it is also exceptionally lasting and is carried on
a very tall, strong stem", (Guy Wilson). The encomium is not overdone;
Killigrew is a glorious flowereach \$10.00
LITTLE JOHN (Lowe 1927) 3. Flat white perianth setting off the short
crown of richest orange; extremely brilliant in garden effect, and of quite
exceptional carrying qualityeach \$3.50
LOCH FYNE (The Brodie 1914) 3. A delightfully clean white and yellow
bicolor, the crown long and prettily frilled; strong and healthy in growth,
and very free; unfailingly goodeach 50c
MERCURIUS (de Graaff 1930) 2-3. An immense full yellow flower with
a touch of orange in the big widely open crown; not very smoothly finished,
but a showy garden planteach \$5.00
MERKARA (Mrs. Backhouse 1928) 5. Broad yellow perianth; large open
crown heavily and richly flushed with orange; very handsomeeach \$10.00
MI CAREME (Mrs. Backhouse 1927) 4. A large flower in two tones of
yellow; very effective planted in front of Red Crosseach 25c
NILLUMBIK (West 1927) 2. A glorious flower with broad creamy peri-
anth and large expanded orange-frilled crowneach \$15.00
PILGRIMAGE (The Brodie 1923) 3. A beautiful clear self yellow of
heavy substance and waxy smoothness; the segments cup somewhat. each \$1
PRINCE FUSHIMI (Welch 1908) 6. A curious but highly decorative
flower, the white segments twisted like an airplane propeller; crown widely
open, light citron, with a gay apricot-orange edge; very lateeach \$1.00
RED CROSS (Mrs. Backhouse 1928) 4. Very tall and showy plant, the
perianth primrose with deeper yellow orange-flushed crowneach \$1.00
ROSE MARIE (de Graaff 1927) 4. Introduced as a barrii, but surely out
of place there, as the light yellow crown is quite large; broad-petaled white
perianth; a very attractive flowereach \$5.00
SCARLET QUEEN (West 1925) 2-3. Enormous rounded flower with
broad perianth segments of Baryta Yellow paling to cream white toward
the tips; the broad expanded crown Lemon Chrome within, heavily frilled,
and with nearly a half-inch margin of Orange Chrome; one of the most
breath-taking of modern daffodils; stock free of stripe now seems almost
impossible to import, but our first bulb and its progeny have fortunately re-
mained unanimously cleaneach \$25.00
TAMPA (Mrs. Backhouse 1928) 6. Perianth creamy white; crown deep
yellow, frilled orange; lateeach 75c
TELOPEA (West 1929) 2. Flat creamy white pointed perianth; large
open crown of deep orange shading to gold at base; a very colorful early
flowereach \$15.00
W. F. GATES (West) 3. A refined clear yellow flower from Australia of
beautiful form and good substance; finely proportioned rather narrow
crown; very sturdy planteach \$5.00
ZOE (West 1928) 3. An outstanding daffodil on the order of a glorified
Bernardino, but with wide frilled crown more yellow and orange and less
apricot; the whole plant larger and stronger in all its parts. Extremely
showy in the garden; 4½ to 5 inches across, 2 ft. or more tall. Only one or
two to goeach \$25.00

CUPS

These show strong ancestral influence of Narcissus poeticus, and therefore as a class tend to high color in the corona and lateness of bloom.

ALBATROSS (Engleheart 1891) 4. Old and well known garden variety suggesting a whiter Conspicuus.....each 20c

ALCIBIADES (de Graaff 1927) 6. Creamy white perianth; open yellow cup with orange frill; very late.....each 30c

ALCIDA (Mrs. Backhouse 1923) 4. Large flower with flat creamy peri-
anth and large orange-frilled lemon cupeach 30c
ARTHUR BOWMAN (Mrs. Backhouse 1927) 5. Dainty, but very gay
little flower with cream-white perianth and red-edged yellow cupeach 25c
BOHEMIENNE (de Graaff 1928) 6. Creamy perianth, small ruffled
yellow cup with orange picotee; lateeach 50c
BRIGHTLING (Mrs. Backhouse 1922) 4. This well-named variety has a
light-yellow perianth encompassing a frilled saucer-shaped crown gaily
flushed with bright reddish orange; a colorful planteach \$1.00
BRILLIANCY (Engleheart 1926) 3. Informal starry primrose perianth
and open yellow cup, picoteed red orangeeach 25c
CINDERELLA (de Graaff 1927) 6. Creamy white perianth; cup of solid
fiery Orange Chrome; very late, medium heighteach 50c
CIRCLET (Engleheart 1907) 3. Neat low-growing flower with rounded
white perianth and orange edged yellow cupeach 25c
CONSPICUUS (Backhouse 1886) 4. Soft primrose perianth, yellow cup
edged scarlet-orange; always a decorative garden plantdozen \$1.25
DIANA KASNER (Mrs. Backhouse 1927) 5. Handsome big flower with
creamy perianth and fluted yellow cup with an orange frilleach 30c
· ·
DOSORIS (P. D. Williams 1910) 3. Small flower with creamy perianth and frilly orange cup
EARLY SURPRISE (Mooy 1927) 3. Semi-dwarf white with orange
cupeach 25c
ELIZABETH RYAN, 4. Another of the smaller more dainty flowers;
light yellow cup against white perianth; very winsomeeach 35c
FIRETAIL (Crossfield 1910) 4. Tall, the ivory white perianth contrasting cleanly with an eye which is pretty nearly redeach 25c
FRAU MARGARETHE HOHMANN (de Graaff 1928) 6. White peri-
anth; yellow cup with reddish orange rim
FREIFRAU VON FRIESEN (Mrs. Backhouse 1929) 5. Same type as
preceding but earlier
white perianth, crown bright yellow rimmed orange scarleteach \$1.00
MASTERPIECE (Engleheart 1905) 5. A small and exquisitely dainty
white flower with flat eye of pure Seville-orange; late
MESSINA (P. D. Williams 1908) 2. White perianth contrasting with the
strongly red-toned eye; the earliest flower in the groupeach \$2.00
MRS. BARCLAY (Mooy 1924) 4 Well formed primrose perianth paling
to white; large flat eye of light yellow with neat orange picotee each 25c
NANNY NUNN (Mrs. Backhouse 1923) 4. Somewhat nodding flower
with primrose yellow perianth and orange cupeach 25c
NIOBE (de Graaff 1927) 4. Creamy perianth with large deep orange eye;
beautiful drooping budseach 25c
ODYSSEUS (de Graaff 1927) 5 Flat white perianth carrying a deeply
laciniated lemon cup; quite lateeach 25c
PERIL (Lowe 1927) 3. A pretty New Zealander after the type of the
popular Yellow Poppy; soft yellow perianth and flat eye edged reddish;
loose habit and not talleach \$1.00
RED BEACON (J. C. Williams 1916) 4. The brilliant orange scarlet eye
contrasts well with the flat white perianth; medium height
ST EGWIN (P. D. Williams 1927) 4 Magnificent tall emoothly rounded
ST. EGWIN (P. D. Williams 1927) 4. Magnificent tall smoothly rounded flower of the highest perfection in form and finish; clear soft yellow through-
flower of the highest perfection in form and finish; clear soft yellow through-
flower of the highest perfection in form and finish; clear soft yellow throughout; very limited stock
flower of the highest perfection in form and finish; clear soft yellow through-

TRIANDRUS HYBRIDS

Among the most seraphic of daffodils, the members of this group must ever be watched hard against "stripe."

AGNES HARVEY (Spurrell 1902) 3. Dainty white drooping flowers; usually two or three to a stem......each 20c

MOONSHINE (de Graaff 1927) 5. Same type as Agnes Harvey, but a more elegant and beautifully formed flower.......each 50c

PEARLY QUEEN (de Graaff 1927) 4. Creamy perianth with large, conical light lemon crown; two or three nodding flowers to a stem each 35c

CYCLAMINEUS HYBRIDS

BERYL (P. D. Williams 1907) 3. Small sprightly flower with soft yellow reflexing perianth and yellow cup edged orange; dwarf habit......each \$1.50 FEBRUARY GOLD (de Graaff 1923) 1. An alert little deep yellow trumpet with reflexing perianth segments; glorious in color and always in a race with Cantabricus to be the first daffodil of the New Year.....each 25c

JONQUILS AND JONQUIL HYBRIDS

Some of the finest yellows and sweetest scents in daffodils are found in this group. They must be watched hard for stripe.

GOLDEN SCEPTRE (de Graaff 1914) 3. Perianth somewhat hooded; trumpet flaring with a nicely rolled brim; pure jonquil-yellow throughout; long season _______2 for 25c

GRACILIS, 6. An extremely late cluster-flowered light yellow jonquil with a spicy fragrance of its own; origin not certainly known.....each 50c

LANARTH (P. D. Williams 1907) 3. Smooth rounded deep yellow perianth and shallow orange-gold crown; narrow foliage; a distinct and exceedingly beautiful flower ______each \$5.00

					with a trumpet-
like crown					2 for 25c
WHITE W	EDGWOOD	(de Graaff	1927)	3. Refined	creamy perianth
and pale primi	cose crown; a	very lovely	flower		each \$1.25

"POETAZ" GROUP

These are hybrids between the early flowering bunch-flowered Narcissi (Tazetta) and various forms of Poeticus. They are invaluable in California gardens for their splendid vigor, great freedom of bloom, and pleasant fragrance. They are full of artistic possibilities as cut flowers, all having two or more blossoms to a stem. Our list is an exceptionally fine one. ALBERT VIS (Vis 1913) 6. Bold white perianth with flat orange eye; a handsome plant and one of the last to flower.....each 50c ANAK (Australian) 3. Dainty lemon-tinted form.....each \$3.50 ASPASIA (van der Schoot 1910) 4. Finely formed white flower with CHEERFULNESS—(see Doubles). GLORIOUS (J. C. Williams 1923) 4. Tall large white flower with a strong reddish rim to the orange cup; said to be good in semi-shade and a splendid cut-flowereach \$2.00 GOLDEN PERFECTION (de Graaff 1927) 5. A gigantic smooth soft yellow flower with a somewhat deeper yellow cup; two or three flowers to a stem and therefore ranked as a Poetaz, but it is a most magnificent flower totally different from any of the others; small stock.....each \$15.00 HELEN MARY (Dutch origin) 4. White and yellow; a very lovely variety for bowl or pot culture.....each 25c **HELIOS** (Dutch origin) 2. Primrose yellow perianth with a deeper cup. KLONDYKE (van der Schoot 1907) 4. Yellow perianth with cup of deeper toneeach 20c MEDUSA (P. D. Williams 1907) 3. Lovely round white perianth with scarlet-orange eye; a beautiful garden plant.....each 50c PEERLESS (Mrs. Backhouse 1927) 4. A lovely variety sometimes classed as a "Barrii", although there are two or three flowers on a stem; the cup is hot intense reddish orange, one of the most vivid hues to be found in our daffodils, which is very sun-resistant; slow of increase.....each \$5.00 PRINCESS YOLANDE (Mooy 1930) . A magnificent new Dutch introduction, the flowers large and in heavy heads, but borne on sufficiently stout stems with leaves to match; white with deep yellow eye.....each \$1.00 **PROFUSION** (Dutch origin) 3. Lovely starry white perianth with yellow eye, the flower heads loosely arranged giving a light informal effect of great charm both in the garden and in vases; almost one of the indispensables and not nearly so well known as it deserves (see illustration on front cover)each 35c SCARLET GEM (P. D. Williams 1910) 4. Primrose perianth with lively orange eyeeach 25c STARLIGHT (Australian origin) 5. Narrow petaled white perianth with

"THE POETS"

small deep orange cup; a charming piece of color......each \$3.00

The garden forms of NARCISSUS POETICUS are many of them much alike, but a properly chosen series will give not only a longer period of

bloom but a charming variation in height and in the more intimate minutiae of form, carriage, and the colorful details of the eye.

Daffy-down-dilly has come to town, In a white petticoat and a green gown.

BLACK PRINCE (Engleheart 1913) 3. A superb early Poet, with full
round perianth and beautiful red-rimmed eye; medium heighteach \$1.50
CAESAR (Engleheart 1913) 5-6. Tall rather late Poet of exceptional
roundness of form and smooth finish; exceedingly fine in southern California,
where it is one of our besteach \$1.00
DULCIMER (Engleheart 1913) 6. Beautifully formed round flower of
perfect smoothness, the tallest in the serieseach 50c
EDWINA (de Graaff 1927) 5. Another very beautiful broad petaled
variety with a particularly snowy periantheach 25c
EPIC (Engleheart 1907) 4. An early sort of the general type of the well-
known Horaceeach 20c
GLADYS DOBIE (de Graaff 1927) 6. A dainty, rather low and slender
growing varietyeach 50c
HEXAMETER (The Brodie 1927) 6. "Bred between Dactyl and Rae-
burn—a lovely tall green-eyed Poet of fine substance, perfect form and qual-
ity" (Wilson). It is of only moderate height in Redlandseach \$2.00
HOMER (Engleheart 1898) 3. Another good garden variety of the Horace serieseach 25c
Horace serieseach 25c
HORACE (Engleheart 1897) 4. Decorative loose-petaled flower of good
garden habit; an old-timer which we still enjoy keeping
ORNATUS MAXIMUS, 6. A good late form
POETICUS var., 6. A grand old garden form from Maine where it has
been grown for generations; a smallish well-formed flower of great vigor
which blossoms with us in April, about the last daffodil
RAEBURN (Engleheart 1913) 5. Another of Mr. Engleheart's wonderful
Poets and one of the most charmingeach \$1.00
SNOW KING (Dawson 1910) 6. A large somewhat loose late flower;
very goodeach 50c
WEEBUD (Mrs. Backhouse 1927) 5. A beautiful broad-petaled flower
with so white a perianth that although classed by the R. H. S. as a 3b, it
seems more at home amoong the Poets; probably it is really on the border-
line each \$1.00
DOUBLES
ARGENT (Engleheart 1907) 3. A well built flower of white and lemon; medium heighteach 25c
CHEERFULNESS (van der Schoot 1923) 5. Captivating double-flowered
sport of the Poetaz Elvira bearing clusters like little white and yellow
camellias each 20c

SMALL SPECIES AND MISCELLANEOUS

 CANTABRICUS (Clusii) 1. The fairy-like "white hoop-petticoat", one of the most precious of small daffodils, opening its first flowers in Redlands early in Januaryeach 50c

TAZETTA, var., "CHINESE SACRED LILY," 1. An exceptionally fine form of this plant.....each 20c

TAZETTA, var., 1. Fluffy heads of cream and primrose flowers in midwinter; a beauty, but true name unknown.....each 20c

WHITE JASMINE (Thurston 1932) 1. Pure white cluster-flowered tazetta, apparently a particularly good healthy seedling form of the well-known Paper Whiteeach \$3.00

NOTE: The following daffodils are of suitable stature and size for rock gardens or similar restricted and intimate associations:

Agnes Harvey
Beryl
Bulbocodium
Campernelle
Cantabricus
Circlet
Elizabeth Ryan
Crange Queen
Peril
St. George
W. P. Milner

Our daffodil plantings are remarkably free of pests and the bulbs are certified for inter-county and inter-state shipment without hot water treatment.

COLLECTIONS

SPECIAL OFFER. 3 bulbs each of 10 selected varieties, \$5.50 postpaid. A still better collection is offered for \$10.00, and a very fine one indeed for \$20.00. We have never had a dissatisfied purchaser for one of these collections.

IRISES

OUR OWN INTRODUCTIONS

JACINTO (1924). Of fair size and attractive symetry; 4 ft. stem, well branched; a tall pale blend of neutral tone with a pinkish cast.....each 35c

SAGAMORE (1928). A superb tall fulva hybrid on the general order of Cacique, but redder and with a larger and more brilliant gold signal on the falls. The effect of this iris in sunshine is exceedingly brilliant; height 3 ft. and over. Stock still small each \$5.00

CRUCIBLE (1929). Grayish lavender with conspicuous golden throat which lends it noteworthy garden value. Large, floriferous, and distinct. An interesting parent in breeding; $3\frac{1}{2}$ ft.....each 50c

ACROPOLIS (1929). H. M., A. I. S. A seedling of Conquistador by Moa, combining the richness of color of the pollen parent and the antecedent Dominion with the size and rampancy of the seed parent. A magnificent deep violet bicolor of extraordinary carrying quality, it is one of the four or five most beautiful bearded irises in our entire garden. No fine collection is complete without it; 4 to 5 ft. Strong rhizomes......each \$2.50

TAFFY (1930). A jaunty little iris done in tones of Reed Yellow, Sulphine Yellow, Pearl and Old Gold, the general effect a taffy-yellow self; beard orange; late flowering and delightful; 18-24 in.....each 50c

PALOMAR (1931). H. M., A. I. S. A large-flowered clear deep violet self, remarkable for brilliancy of color, smooth finish, and trim form, almost as though "tailored"; 3 ft......each \$2.00

FLUSH OF DAWN (1931). A very floriferous soft blend in tones of Light Lobelia Violet, Light Brownish Vinaceous, and Olive Buff, all tints of the early morning sky. This is wholly charming as the light filters through the petals, and is especially beautiful for use under artificial illumination, other flowers in tones of clear blue or deep buff combining with it particularly well. An interesting parent in breeding; 3 ft......each 50c

COLONIAL (1932). A soft bicolor in tan and rose, warming in the heart to Deep Colonial Buff, and the F. with a bloom like the cheek of a peach (Dahlia Carmine of Ridgway). It is in the same color group as Cameliard. You will want this the moment you see it. Early; 2-2½ ft.....each \$3.00

MAZAMA (1932). This strong-growing, rose-toned bicolor has been one of our most admired irises this season. The Pansy Purple falls show from afar. It is a somewhat complex derivative from Mauna Loa with just a touch of Dominion added. Though so large it has only ½ mesopotamica and its other ancestors are all hardy ones; 4-4½ ft.....each \$3.50

BROCADE (1933). A somber but rich-hued bicolor, exceptional in style, form, size and poise; S. Ageratum Violet to Wood Brown; F. Dahlia Purple to Blackish Red-purple, set off by a narrow interrupted margin of pale violet gray, beard Cadmium Yellow; magnificent for exhibition; Alcazar, Conquis-

tador, Medrano, and Moa comprise the ancestry of this very distinctive iris; 4½-5 ft. each \$10.00

MOHAVE (1934). A large and very early iris in an unusual and very beautiful blending of colors, perhaps best described as a suffusion of vinaceous old rose and tan; it is comparable to nothing else we know, and is much admired; 40 in.each \$20.00

MOONGOLD (1935). An extremely early large-flowered broad-petaled soft yellow self, a priceless gem because flowering with the later daffodils and lovely with them; Pinard Yellow, the S. illuminated with Lemon Chrome, the F. veined Old Gold near the Cadmium Yellow beard; bred from Argentina by Colonial which it suggests in shape and style; 30 in. ea. \$10.00

MOHICAN (1936). A noble sister seedling of Jubilant; earlier and taller, the S. Tawny Olive, F. Madder Brown heavily overlaid Burnt Lake, the color solid to the Orange-tipped Cadmium Yellow beard; 4 ft.; very small stock each \$25.00

SEEDLING 24-276-1. (1936. Name to be registered). An immense purple-lavender flower of rather ordinary color but with huge ruffled petals and an overflush recalling that seen on Japanese iris; well grown, this is a superlative flower for exhibition. It is hard to convince some people that there is no Oncocyclus blood, but if so, the bees brought it; 3½ ft. each \$10

DAYSPRING (1936). Another exquisite early yellow which in time of bloom follows hard on Moongold; a light yellow self in effect with a wash of metallic orange gold across the fall; exceptionally warm and appealing in the garden. This is a new break in yellow which appeared unexpectedly in a brood of seedlings bred for reds; we might think it adventitious did not shape, texture, size, and character of venation conform to others in the series, which came from an inbred second generation of Mesopotamica—Lent A. Williamson cross, by pollen of Nancy Orne. With this curious ancestry it should prove of enormous value in breeding as it carries potent pollen and is a heavy seeder; 40 in.; stock small——each \$20.00

BLUE DEEP (1936). A rich and brilliant iris in tones of deep violet with a magnificent rich brown throat; bred from pollen of Mme. Gaudichau on a seedling having Orizaba and a sib of the latter as its parents; one of the outstandingly fine things we have raised; 4 ft.; stock small. each \$25.00

PRIDE OF REDLANDS (1936). A tall, large, and very late iris of altogether new coloring; S. Deep Olive Buff to Chamois, shot Purplish Lilac; F. rich Maroon, washed Violet Carmine; from the same seed-pod as Olympic. This showy and beautiful plant is respectfully dedicated to the University of Redlands whose colors of maroon and gray it flaunts as nearly as we can soon expect in a single iris; 5 ft.; only one or two to go. each \$25

WILD TYPES OF POGONIRIS

We are especially interested in the wild forms of iris and have a considerable collection of which the following of the bearded irises are now available in more or less surplus. They are particularly interesting to those concerned in breeding work or botanically inclined, but most are likewise fine garden plants.

ALBICANS. Indispensable early white	
AMAS. Asia Minor form of germanica	25c
BAVEILLES. A germanica from the south of France	50c
BILIOTTI. Low growing deep violet iris from Asia Minor	75c
COMO. A lovely pallida collected in Italy by Farrer	\$1.00
CRETAN. Early deep violet germanica, especially brilliant when	n first
opening; richly bitonal and very fine in mass	50c
FLORENTINA. Early mid-season white	25c
ISTRIA. Cool white with hint of green, from near Fiume	\$1.00
KERMAN. Large Persian germanica	50c
KOCHII. Dark violet; early	50c
MADONNA. Alleged blue form of albicans	
MESOPOTAMICA. Enormous Asiatic ancestor of many of our	finest
hybrids	50c
NEPALENSIS. Black-violet form of kochii	
PALLIDA. Lovely tall lavender	
PALLIDA DALMATICA. A larger and darker form	35c
REICHENBACHII. Dwarf yellow Balkan type	50c
ROCAMADOUR. Attractive early germanica from France	\$1.00
SYRACUSE. Fine Sicilian form of albicans	
TROJANA. Well-branched violet bicolor	
TROSUPERBA. Tall variant of trojana	75c

POGONIRIS—GARDEN VARIETIES

Duly allowing for personal preferences and special conditions, we have found all the varieties offered in the present list which we have had long enough for fair testing to be worth growing for one reason or another.

Varieties having the names printed in capitals are in a way specialties of ours, and of these we have developed a particularly fine stock. These are all highly recommended.

Varieties marked with an asterisk are mostly quite new sorts of which we

have only very limited stocks as yet.

We are shortening the description of many of the older varieties in order to make room for the more lengthy notices required of the newer ones. More detailed descriptions can be found in the publications of the A. I. S., as well as in our older catalogues, some of which are still available for those who care to send postage for the mailing.

Afterglow (Sturtevant). Yellow-lavender blend	each	25c
Airy Dream (Sturt.). Tall ruffled orchid; late		
Alameda (Mohr-Mitchell). Large fragrant plicata		
Albert Victor (Barr). Deep lavender pallida	each	25c
Aliquippa (Hall). Lovely soft yellow	each	35c
Allure (Murrell). Enchanting pale orchid-flushed yellow blend;	late	and
the better for some shade	each	35c

Amndelia (Staart.) Dainty new rose-stippled plicata; strong grower; love- ly for cutting	*ALTA CALIFORNIA (MM.). Huge new 4 ft. yelloweach \$2.00
Anndelia (Stuart.). Dainty new rose-stippled plicata; strong grower; love- ly for cutting — each 50c *ANNE-MARIE CAYEUX (Cayeux). Handsome, tall smooth lilac blend; very distinctive — each \$1.00 Ann Page (Hort). Large 3 ft., blue-lavender — each 25c Anosia (Williamson). Bronzy gold and maroon; late — each 25c Antonio (Hort). (

POGONO-CYCLUS AND POGONO-REGELIA

The following hybrids of various Oncocyclus and Regelia Irises with members of the Pogoniris group are interesting and not unduly difficult of culture:

Bellorio (Mohr). Soft gray-lavender.....each 35c GIRAN (Foster). Wine-colored. We have two distinct things under

this name but have been unable to discover which is true. Both are beautiful
irises each 50c
Lady Lilford (Foster). Handsome purpleeach 50c
Morera (MM.). Mulberry purple korolkowi hybrideach 50c
Nefert (Foster). Soft blue without markings except the darker signal;
quite handsome and different from others of the typeeach 50c
WILLIAM MOHR (Mohr). The result of a Parisiana-Gatesii cross and
one of the most extraordinary hybrid irises ever raised. A magnificent iris
for exhibition; demands perfect drainageeach 35c
Zwanenburg (Denis). An odd brownish flower with purple splashes.
Semi-dwarf habiteach 35c, 4 for \$1.00

REGELIA AND REGELIO-CYCLUS

(Early Summer or Fall Delivery Only)

EVANSIA

Cristata. A tiny wild species from North Carolina; likes partial shade; dwarf habiteach 35c FAIRYLAND (Stevens 1936) (See Introductions).
Gracilipes. This woodland elf is practicable in southern California gardens only under special conditions; shade and loose woodsy earth which is not allowed to bake out. Offered subject to condition of stock.....each 75c Fleeting light blue flowers with delicate mottling; the JAPONICA a. spikes keep flowering over a long season; likes partial shade......each \$1.00 JAPONICA b. Paler blue than preceding.....each 35c Tectorum. The well known Roof Iris; flat blue-purple flowers with a conspicuously fringed white crest.....each 50c The exquisite white form of the preceding......each \$1.50 Tectorum Alba. WATTII. An amazing iris from the southeastern slopes of the Himalayas with a habit somewhat recalling a dwarf bamboo; flowers white or slightly tinted, borne in airy panicles over a long season; scarcely known to American horticulture as yet and therefore of untested hardiness in most parts of the country, but in southern California at least in no respect a difficult subjecteach \$1.00

APOGON—(American Species)

CACIQUE.	(See	eint	roductioi	ns).				
*Chrysopher	nicia.	Tall	reddish	purple	from	Louisiana	each	\$1.00
Rubicunda.	Tall	and	reddish				each	\$2.50

Mediterranean Group—(Winter Flowering)

UNGUICULARIS ALBA. White and gold; slightly shorter blooming season than preceding. Says the inimitable Farrer, "It is a flower straight from heaven—a transcended snowy Crocus or Zephyranthes." Same price.

Spuria Group—(Fall and Winter Delivery Only)

A. J. Balfour. Fine, tall, blue....each \$1.00 *ALICE EASTWOOD (Branin). A magnificent ochroleuca hybrid. One of the handsome irises in this group and should be in every garden (see illustration on back cover).....each \$5.00 SPURIA HYBRIDS. We believe this charming strain of seedlings to be better referred to spuria than to halophila as heretofore; varying from cream into different tints of lavender, they are lovely for the house; 4 ft....each 50c *GOLDEN STATE (Branin). Big tall, deep yellow, of splendid form and style; absolutely outstanding in every way; true stock, very scarce....each \$10 Graminea. Dwarf purple grassy-leaved species suitable for rock garden or low border; fragrance of ripe plums.....each \$1.00 *Halophila Lutea. Small, creamy; 2 ft.....each \$1.00 Lord Wolseley. Handsome blue-purple hybrid; tall....each 75c Monaurea. Tall, medium-toned yellow.....each \$1.50 Moderately tall, soft yellow....each 75c Tall, blue-purple.....each 75c Monspur. Notha. Beautiful pale lavender spuria.....each 50c *Ochraurea. A fine tall hybrid in two shades of yellow.....each \$1.00 Ochroleuca. Tall, white and yellow.....each 25c Ochroleuca Snowflake. A beautiful variant form; tall.....each 50c Ochroleuca Warei. A very handsome variant of ochroleuca.....each 75c *Queen Victoria. A splendid tall cream and gold iris......each \$1.00 SHELFORD GIANT. One of the grandest plants in the group. each \$1.00 Spuria. Lavender-blueeach 75c

Siberian Group—(Fall and Winter Delivery Only)

*CAEZAR (Morgan). We are very fortunate in being able to offer a few plants of this superb deep violet Siberian each \$1.00 *Delavayi. Interesting tall blue species from Western China. We have a very few acclimated plants each \$1.00

Emperor. Magnificent dark blue collected form; easyeach	. 50c
Florrie Ridler (Perry). Deep blueeach	75c
Perry's Pigmy. Dwarf blueeach	
*WHITEHILL. (See Introductions).	

Miscellaneous

year; ornamental foliageeach 50c *Moraea Macleayi. Smaller flowered than preceding and lower in growth, but of similar habit; a nice thingeach \$1.00

NOTES

NOTES

NOTES

EASTERN CUSTOMERS WILL FIND OUR ABILITY TO SHIP BOTH IRISES AND DAFFODILS BEFORE THE END OF JUNE AN INESTIMABLE ADVANTAGE, GIVING THE PLANTS AN EXTRA LONG PERIOD OF ROOT-GROWTH BEFORE THE ONSET OF WINTER.

SPECIAL NOTE

Our garden is not a large one, nor grandly landscaped, but it contains its full quota of rare and interesting plants, and those who will but remember that it is simply a horticultural workshop and do not expect too much of it otherwise, are always welcome visitors. In addition to our innumerable daffodils and irises, which form a collection not easily surpassed, we grow various species of Moraea and Nerine, a very fair array of freesias and Hemerocallis, and divers odds and ends in small bulbs, rock plants, peonies, and other perennials. Late spring and early summer and again the fall are in general the most favorable times to secure stock for planting, but to view the flowers our spring months are best, February and March for daffodils and April to June for irises.

THOSE COMING FROM OUT OF TOWN MAY APPRECIATE THE CONCLUDING REMINDER THAT REDLANDS IN ROSE AND ORANGE-BLOSSOM TIME IS A SIGHT WORTHY A FAR JOURNEY TO SEE.

ALICE EASTWOOD, see page 26.
